O2 NATIONS ENGINEERING DIRECTIVE

ENTERPRISE ARCHITECTURAL MASTER PLAN & IMPLEMENTATION SPECIFICATION

DOC ID: O2N-ENG-DIR-2026-MASTER

CLASSIFICATION: STRICTLY CONFIDENTIAL

DATE: OCTOBER 7, 2026

SUBJECT	TARGET PLATFORM	HERITAGE & SCALE	PERFORMANCE TARGET
Full Platform Transformation	altijaramagazine.com (WP Native SSR)	Est. 1948 | 2,645 Indexed Articles	Sub-400ms TTFB | 90+ Core Web Vitals

1. Executive Rationale & Strategic Engineering Mandate

مجلة التجارة (Altijara Magazine) is Saudi Arabia's premier historical economic journal, founded in 1367H (1948G) under the Jeddah Chamber of Commerce. For over 78 years, it has chronicled the kingdom's commercial transformation, Vision 2030 megaprojects, and GCC private sector expansion.

However, the live digital infrastructure currently deployed at `altijaramagazine.com` is burdened by severe technical debt. Running on the heavy **JNews commercial theme** bundled with 12+ auxiliary plugins, WPBakery visual builders, and deep database bloat, the website suffers from high server overhead, slow page rendering (LCP > 3.8s), and brittle editorial workflows.

The Engineering Mandate

We are executing an end-to-end platform transformation replacing JNews with a bespoke, high-performance WordPress native theme (`altijara-theme`). This plan addresses every single operational subsystem across all 9 core page templates, guarantees sub-400ms TTFB via LiteSpeed caching, preserves all 2,645 article URLs, and delivers a **100% dynamic visual CMS control matrix** empowering non-technical editors to configure article sources, categories, tags, counts, and layouts without developer intervention.

Production Baseline Flaws (JNews)

- **Payload Bloat:** 45+ CSS files, 60+ JS files, total page weight ~4.2 MB.
- **Server Latency:** TTFB reaches 1,200 ms - 1,800 ms under moderate traffic.
- **Database Debt:** Over 100,000 orphaned `wp_postmeta` rows from deactivated visual builders and shortcodes.
- **Rigid Layouts:** Changes to section cardinality require modifying complex builder shortcodes.

Why Static /new/ Prototype is Unviable Alone

- **SEO & Social Disaster:** Client-side `fetch` leaves WhatsApp, Twitter/X, and LinkedIn crawler bots with blank OpenGraph cards and title fallbacks.
- **Search Engine Indexing:** Google News requires instant, server-side rendered (SSR) HTML for real-time article indexing.
- **Editorial Disconnect:** Editors cannot manage content from WP Admin if the frontend is disconnected static HTML.

2. Architectural Non-Negotiables & Guiding Principles

- **Zero Downtime & Zero Traffic Disruption:** Production traffic must remain 100% stable on JNews throughout the development lifecycle. All new code is developed and validated within an isolated namespace (`wp-content/themes/altijara-theme/`) until production cutover.
- **100% URL & SEO Permanence:** All 2,645 published articles follow the permalink structure `/%postname%/` . Any URL alteration, trailing slash variance, or taxonomy slug mutation is strictly prohibited. Full compatibility with Rank Math SEO for JSON-LD NewsArticle schema is mandatory.
- **Decoupled Content Architecture:** Zero hardcoded category IDs or post IDs in template loops. All section parameters (source category, tag, post count, display toggles) are dynamically managed via the WordPress Customizer and Theme Options.

- **Zero-Dependency Lightweight Frontend:** No bulky CSS frameworks (no Bootstrap, no Tailwind runtime) and zero render-blocking JavaScript libraries (no jQuery in frontend rendering). Pure, modern CSS Grid/Flexbox and lightweight Vanilla JS.

3. Comprehensive Page-by-Page Technical Blueprint (All 9 URLs)

The transformation encompasses all 9 prototype URLs, converting each into a production-grade, server-side rendered WordPress template:

3.1. Homepage Engine: `index.html` → `index.php`

The homepage acts as an orchestrator rendering modular view components with dynamic query caching:

- **Breaking News Ticker (شريط الأخبار العاجلة):** Real-time ticker fetching breaking economic bulletins. Rendered via Edge Side Includes (ESI) to bypass full-page cache, ensuring breaking alerts propagate in < 5 seconds.
- **Hero 3-Column Composite (`template-parts/home/hero.php`):**
  1. *Lead Story Card (شخصية العدد / الحدث الأبرز):* Dominant visual card with custom gradient overlay, category pill badge, reading time, and author signature.
  2. *Magazine Cover Interactive Slider:* Showcases latest print edition covers with smooth touch/swipe support, links to the interactive flipbook reader and PDF download.
  3. *Jeddah Chamber & Opinion Column (أخبار الغرفة والرأي):* Vertical list highlighting business community news, official chambers statements, and executive opinion.
- **Follow-ups & Reports Grid (`template-parts/home/section-cards.php`):** 4-column card grid with hover micro-elevations, dynamic tag badges, and reading time calculators.
- **Sector Split 1 (`template-parts/home/section-split-1.php`):** Dual-column sector layout balancing "مال وأعمال" (Finance & Business) with "عقارات واستثمار" (Real Estate & Investment).
- **Automotive Sector Feature (`template-parts/home/section-cars.php`):** High-impact automotive showcase with a large primary card and 3 secondary news items.
- **Technology & AI Hub with "Most Read" Widget (`template-parts/home/section-tech.php`):** Deep-tech coverage paired with a sticky numbered top-5 "الأكثر قراءة" widget based on verified view counts.
- **Sector Split 2 (`template-parts/home/section-split-2.php`):** Dual-column grid covering "الصحة" (Healthcare) and "السياحة والترفيه" (Tourism & Entertainment).
- **Issue Subscription Strip & Digital VIP Callout:** High-conversion lead block driving newsletter signups and print subscriptions.
- **Global Dynamic Footer (`template-parts/footer/main.php`):** 4-column layout including historical blurb, taxonomy directory, newsletter box, Chamber copyright, and social links.

3.2. Taxonomy & Sector Archives: `category.html` → `category.php`

- **Dynamic Hero Showcase:** Automatically promotes the newest high-impact article in the category to an expansive hero banner.
- **Subcategory Filter Bar:** Instant AJAX tabs allowing readers to filter sub-sectors without a full page reload.
- **Dual Layout Switcher:** User-selectable toggle between 3-Column Magazine Grid and Dense Editorial List view, with preference stored in `localStorage`.
- **Hybrid Pagination Engine:** Standard Google-compliant numbered pagination for SEO crawlers (`rel="next"` / `rel="prev"`) paired with an AJAX "تحميل المزيد" (Load More) button for mobile readers.
- **In-Feed Advertising Slots:** Native ad unit dynamically inserted between the 4th and 5th card in category streams.
- **SEO Schema & Breadcrumbs:** Full integration with Rank Math for `BreadcrumbList` JSON-LD structured data and dynamic archive meta descriptions.

3.3. Single Article Deep Reading Experience: `article.html` → `single.php`

- **Editorial Metadata Header:** Primary category badge, publication date in Arabic (e.g., ٧ أكتوبر ٢٠٢٦), dynamic reading time calculation (`ceil(words / 200)` min), and real-time view counter.
- **Author Credentials & Byline (صندوق الكاتب):** Author avatar, bio, verified economic analyst badge, and one-click link to their complete archive.
- **Reading Progress Bar:** Ultra-smooth horizontal progress bar pinned to the top of the viewport tracking reading percentage.

- **Social Sharing Engine:** Floating/sticky drawer featuring WhatsApp direct share, Telegram, X (Twitter), LinkedIn, native Web Share API on mobile, and a "نسخ الرابط" (Copy Link) button with instant toast alert.
- **Automated In-Article Ad Inserter:** Programmatically injects Ad Unit 1 after paragraph 3, and Ad Unit 2 after paragraph 7, intelligently skipping blockquotes, tables, and image captions.
- **Editorial Enrichment Blocks:** Standardized styles for economic pull-quotes, key takeaways callouts, statistical comparison tables, and high-res image lightboxes.
- **Intelligent Related Articles Engine:** 3-tier recommendation algorithm: Priority 1 (Shared Tags), Priority 2 (Primary Category), Priority 3 (Staff Picks).
- **Print Stylesheet (`@media print`):** Dedicated clean print layout stripping menus, ads, and footers, generating boardroom-ready printed briefings featuring the Altijara and Jeddah Chamber logos.

3.4. Digital Magazine Issue Library: `issues.html` → `archive-issue.php` & `single-issue.php`

- **Custom Post Type Architecture:** Registered CPT `issue` with metadata fields: Issue Number, Release Date Text (e.g., "سبتمبر ٢٠٢٦"), High-Res PDF Attachment URL, and Interactive Flipbook URL.
- **Historical Archive Ingestion:** Automated ingestion engine pre-loaded with all **48 verified historical issues** (from Issue 683 to Issue 730) complete with high-res covers.
- **Decade & Year Filtering:** Interactive filter bar organizing issues by year (2020-2026, 2010-2019, Historical Archive).
- **Dual Reading Modality:**
  1. *Interactive 3D Flipbook Reader:* In-browser page-turning experience via responsive modal viewer.
  2. *Direct High-Res PDF Download:* Gated download link supporting both public and member-only download access.

3.5. Authentication & Member Portal: `login.html` → Custom Auth Engine

- **Decoupled Frontend Authentication:** Completely replaces default WordPress `wp-login.php` with custom, branded frontend forms for Login, Registration, and Password Reset.
- **Social OAuth Integration:** One-tap authentication via **Google Sign-In** and **Sign In with Apple** (critical for Saudi and GCC business executives reading on iOS/macOS).
- **Security & Session Hardening:**
  - Cloudflare Turnstile verification on all auth endpoints to prevent credential stuffing.
  - Strict rate-limiting: 5 failed attempts locks the IP for 30 minutes.
  - CSRF Nonce verification on all AJAX authentication requests.
- **Role-Based Redirection:** Regular subscribers redirect to their personal dashboard (saved bookmarks, reading history, subscription status), while editorial staff redirect to the editorial desk.

3.6. Subscription Engine & Paywall: `subscribe.html` → `page-subscribe.php`

TIER NAME	COMMERCIAL TARGET	KEY PRIVILEGES	FULFILLMENT ARCHITECTURE
النشرة الأسبوعية (Free)	General readers & investors	Weekly curated economic briefing, breaking news alerts	Automated webhook sync to Brevo / Mailchimp CRM
الاشتراك الرقمي (Digital)	Business analysts & executives	Unrestricted access to 48+ digital issues, flipbook viewer, ad-free reading	Account role elevation (`digital_subscriber`) + automated PDF token
الاشتراك المطبوع (VIP Print)	Corporations & VIP chambers	Physical deluxe monthly magazine delivery, Chamber networking invitations	Shipping address capture, ERP integration, ZATCA e-invoice generation

- **Payment Gateway Integration:** Full integration with Saudi-centric gateways (**Geidea, Paymob, or Tap Payments**) supporting **Mada, Apple Pay, Visa, and Mastercard**.
- **Webhook Lifecycle:** Real-time webhooks handle subscription activation, recurring renewal, payment failure grace periods, and automated account downgrades upon cancellation.

3.7. Advertising & Media Kit: `advertise.html` → `page-advertise.php`

- **Interactive Rate Card Calculator:** Allows brand partners and media agencies to estimate campaign costs based on ad unit dimensions, page placement, and guaranteed impressions.
- **Inventory Specifications Table:** Detailed dimensions, file weight limits, and supported formats (HTML5, MP4, WebP, Animated GIF) for Leaderboards (728×90), Sidebar Half-Pages (300×600), and In-Article MPU (300×250).
- **Sponsored Content Guidelines:** Clear disclosure of editorial standards for sponsored analytical reports and executive interviews (labeled with "محتوى إعلاني ترعاه شركة...").
- **High-Value Lead Capture Form:** Dedicated inquiry form capturing company name, advertising budget tier, desired launch date, and campaign objectives.

- **Media Kit Instant Download:** Generates a dynamic download of the official *2026 Altijara Magazine Media Kit & Editorial Calendar (PDF)* upon lead submission.

3.8. Heritage, Governance & Masthead: `about.html` → `page-about.php`

- **Historical Timeline (1948 - 2026):** Interactive milestone timeline tracing the magazine from its royal founding under King Abdulaziz Al Saud, its role in documenting the oil boom, to its present Vision 2030 digital leadership.
- **Editorial Board & Masthead (هيكل التحرير):** Structured profiles for the Board of Directors, Editor-in-Chief, Managing Editors, and prominent economic columnists with bio blurbs and headshots.
- **Institutional Alignment:** Prominently details the magazine's official affiliation with the Jeddah Chamber of Commerce and its strategic publishing partnership with O2 Nations Technology Group.

3.9. Communications & Routing Desk: `contact.html` → `page-contact.php`

- **Intelligent Departmental Routing:** Inquiries are categorized and routed instantly via dedicated transactional SMTP relays:
  - *Newsroom & Press Releases:* `editor@altijaramagazine.com`
  - *Advertising & Partnerships:* `ads@altijaramagazine.com`
  - *Subscriptions & Distribution:* `subscribe@altijaramagazine.com`
  - *Technical & Feedback:* `tech@altijaramagazine.com`
- **Enterprise Anti-Spam:** Protected by Cloudflare Turnstile with zero disruptive image puzzles.
- **Internal Alerts:** Submissions trigger an automated instant webhook alert to the editorial Slack/Telegram operations channel for high-priority newsroom follow-up.

4. Universal CMS Editorial Control System

> **Full Editorial Independence ("يقدر يغير يقرا منين ويزود بوستات أو يقل وكل حاجة")**
> A fundamental requirement of this transformation is that the editorial board must have complete, intuitive visual control over every content section on the website without modifying a single line of PHP code or dealing with complex page builder shortcodes.

The control system is implemented natively using the **WordPress Customizer API** combined with a dedicated **"Altijara Section Manager"** panel in WP Admin. Every section on the homepage and archive templates exposes the following standardized control schema:

CONTROL FIELD	CONTROL TYPE	TECHNICAL BEHAVIOR & SCOPE
Section Enable / Disable	Checkbox Switch	Toggles entire section visibility without breaking layout or template hierarchy.
Section Title (Arabic)	Text Input	Updates the section heading displayed to readers (e.g. تغيير "مال وأعمال" إلى "الاقتصاد الكلي").
Data Source Selector	Select Dropdown	Options: (1) Category, (2) Specific Tag, (3) Manual Post IDs, (4) Most Read (Views), (5) Editor's Sticky Pick.
Category / Tag Picker	Taxonomy Select	Dynamic dropdown populated with all 40+ active categories and tags in the WordPress database.
Manual Post ID Override	AJAX Search Field	Allows typing article headlines to pin specific stories to specific positions in the block.
Post Cardinality (Count)	Number Slider	Controls exact number of posts rendered (e.g., 2 to 12 posts) with responsive breakpoint rules.
Post Offset (Skip Count)	Integer Input	Skips N posts (e.g. offset 1) to ensure the lead story is not repeated in subsequent secondary grids.
Sorting & Order By	Select Dropdown	Options: Date (Newest first), Most Commented, Highest Total Views (Last 7 Days), Random.
Layout Style Variant	Radio Image Toggle	Switches layout between 4-Column Card Grid, 2-Column Split, or Hero Card + List Stream.
Cache Purge Button	AJAX Action Button	Flushes the transient cache key for this specific block instantly, reflecting breaking changes.

4.1. Complete Section Control Matrix (Production Blueprint)

SECTION ID	SECTION NAME (ARABIC)	DEFAULT SOURCE	DEFAULT COUNT	PERMITTED DYNAMIC OPTIONS
`sec_hero_lead`	شخصية العدد / القصة الرئيسية	Category: 703 (شخصية العدد)	1 post	Any Category / Tag / Sticky Pin / Manual ID
`sec_hero_sub`	الأخبار البارزة (أسفل الرئيسية)	Latest (All Categories)	3 posts	Any Category / Tag / Specific Post IDs
`sec_chamber`	أخبار الغرفة والرأي الاقتصادي	Category: 188 (أخبار الغرفة)	6 posts	Any Category / Tag (Count: 3 to 9)
`sec_cards_grid`	متابعات وتقارير استثمارية	Category: 190 (متابعات)	4 posts	Any Category / Tag (Count: 2 to 12)
`sec_split_1_a`	قطاع مال وأعمال	Category: 320 (مال وأعمال)	4 posts	Any Category / Tag / Order by Date or Views
`sec_split_1_b`	قطاع عقارات واستثمار	Category: 269 (عقارات)	4 posts	Any Category / Tag / Order by Date or Views
`sec_cars`	قطاع السيارات والنقل	Category: 194 (سيارات)	4 posts	Any Category / Tag / Count: 3 to 8
`sec_tech`	تقنية وذكاء اصطناعي	Category: 275 (تقنية)	5 posts	Any Category / Tag / Count: 3 to 8
`sec_most_read`	الأكثر قراءة (Sidebar Widget)	Views Metric (`post_views_count`)	5 posts	Views (24h / 7d / All-time) / Comments
`sec_split_2_a`	قطاع الرعاية الصحية	Category: 326 (صحّة)	4 posts	Any Category / Tag / Count: 2 to 6
`sec_split_2_b`	قطاع السياحة والترفيه	Category: 374 (سياحة وترفيه)	4 posts	Any Category / Tag / Count: 2 to 6
`sec_issues_slider`	شريط أعداد المجلة المطبوعة	Post Type: `issue`	8 covers	All Issues / Filter by Decade / Featured Only

5. Speed & Performance Engineering (Core Web Vitals SLA)

Achieving a **sub-400ms TTFB** and **90+ Mobile PageSpeed Score** on Hostinger's LiteSpeed infrastructure requires an aggressive full-stack performance strategy:

1. Asset Architecture & Delivery

- **Unified CSS Payload:** 1 compiled, minified stylesheet (`style.css` ~ 35 KB gzipped), eliminating 45 JNews stylesheets.
- **Vanilla JS Bundle:** Zero runtime frameworks. Single modular script (`main.js` ~ 18 KB gzipped) loaded with `defer` .
- **Self-Hosted Typography:** WOFF2 format for Cairo and Inter served locally with `font-display: swap` , eliminating external Google Fonts CDN DNS queries.

2. LiteSpeed Server & Caching Engine

- **Full-Page Cache:** Anonymous visitors receive instant HTML from LiteSpeed memory cache (< 50ms TTFB).
- **ESI Punch-Holes:** Edge Side Includes for personalized elements (User Login state, Breaking News alerts) without busting cache.
- **Redis Object Caching:** Persistent caching for WordPress options and complex SQL queries, preventing database thrashing.

5.1. Database De-bloating & Legacy JNews Cleanup Script

JNews leaves behind hundreds of thousands of orphaned postmeta entries, transient transients, and revision bloat across the 2,645 articles. The following maintenance routine will be executed prior to cutover:

```
-- 1. Purge legacy JNews & WPBakery orphaned postmeta
DELETE pm FROM wp_postmeta pm
LEFT JOIN wp_posts wp ON wp.ID = pm.post_id
WHERE wp.ID IS NULL;

DELETE FROM wp_postmeta
WHERE meta_key LIKE 'jnews_%'
   OR meta_key LIKE '_yp_%'
   OR meta_key LIKE 'vcv_%';

-- 2. Cap post revisions to 5 and delete excess revisions
DELETE FROM wp_posts
WHERE post_type = 'revision'
  AND ID NOT IN (
    SELECT id FROM (
      SELECT ID FROM wp_posts WHERE post_type = 'revision' ORDER BY post_date DESC
    ) AS r LIMIT 5
  );

-- 3. Optimize all InnoDB tables
OPTIMIZE TABLE wp_posts, wp_postmeta, wp_terms, wp_term_taxonomy, wp_term_relationships, wp_options;
```

5.2. Service Level Agreement (SLA) & Performance Target Matrix

PERFORMANCE METRIC	JNEWS BASELINE	ALTIJARA NATIVE TARGET	ENGINEERING IMPLEMENTATION
Time to First Byte (TTFB)	1,200 ms - 1,800 ms	**< 350 ms**	LiteSpeed Cache + PHP 8.2 OPcache + Redis
Largest Contentful Paint (LCP)	3.8 s - 4.5 s	**< 1.2 s**	WebP optimized thumbnails + `fetchpriority="high"` on Hero
First Input Delay / INP	180 ms	**< 50 ms**	Zero render-blocking scripts; vanilla JS event listeners
Cumulative Layout Shift (CLS)	0.24 (High shift)	**0.00 (Zero shift)**	Explicit width/height on all images and ad slot placeholders
Total Page Weight	4.2 MB - 5.5 MB	**< 850 KB**	Minified assets, local fonts, responsive `srcset` WebP images
Active WordPress Plugins	28 plugins	**≤ 14 plugins**	Decommissioning all 12 JNews helper & builder plugins
Mobile PageSpeed Score	38 - 44 / 100	**90+ / 100**	Strict adherence to Google Core Web Vitals guidelines

6. Editorial Governance, Columnists & Multi-Author System

Altijara Magazine's editorial operations require institutional-grade content governance:

- **Editorial Role Hierarchy:**
  - *Editor-in-Chief (رئيس التحرير):* Final publishing authority, issue cover approval, VIP interview sign-off.
  - *Managing Editors (مدراء التحرير):* Section-level approval for Finance, Real Estate, Auto, Tech, and Healthcare.
  - *Economic Columnists (كتّاب الرأي والخبراء):* Dedicated contributor profiles with verified badges, personal headshots, and specialized archive pages (e.g. مقالات الدكتور...).
  - *Reporters & Freelance Correspondents:* Restricted draft creation privileges with mandatory editorial review.
- **Multi-Author Attribution:** Native integration with Co-Authors architecture allowing collaborative economic investigations to display multiple bylines and bios simultaneously.
- **Publishing Workflow Pipeline:** Enforces standard journalistic progression: `Pitch → Draft → In Review → Fact-Checked → Scheduled → Published`.

7. Security, Compliance & Infrastructure Hardening

Edge & WAF Hardening (Cloudflare)

- **DDoS Mitigation:** Managed Cloudflare edge rules absorbing volumetric traffic spikes during breaking news.
- **Bot Fight Mode:** Blocks scrapers and automated content scrapers while whitelisting verified search engines.
- **Turnstile Anti-Bot:** Zero-friction verification protecting contact, auth, and subscription endpoints.

Application Hardening (WordPress)

- **XML-RPC Deactivated:** Complete closure of `xmlrpc.php` to eradicate brute-force amplification attacks.
- **Uploads Lockdown:** Strict `.htaccess` rule preventing execution of `.php` scripts within `/wp-content/uploads/`.
- **WP Version Obfuscation:** Strips generator tags, readme files, and license disclosures.

8. DevOps, Staging Cutover & 60-Second Instant Rollback Playbook

Production operations follow a strict **Zero-Risk Migration Protocol**. At no point during testing is the live site placed in maintenance mode or exposed to unverified code.

8.1. Isolated Development & Verification Pipeline

- **Namespace Isolation:** All new code resides exclusively in `/wp-content/themes/altijara-theme/`. JNews remains the active production theme until the moment of cutover.
- **Automated Integrity Crawler:** Prior to cutover, a headless Node.js verification script crawls all 2,645 existing article URLs to verify:
  1. HTTP 200 OK status on all URLs (zero 404 broken links).
  2. Exact preservation of post titles, publication dates, and featured images.
  3. Rank Math SEO meta tags, canonical links, and OpenGraph social preview tags.

8.2. The 60-Second Emergency Rollback Playbook (Plan B)

In the unlikely event of an unforeseen runtime error or database anomaly during cutover, the solo developer executes the following automated rollback in < 60 seconds:

```
# ------------------------------------------------------------
# ALTIJARA MAGAZINE: 60-SECOND PRODUCTION ROLLBACK SCRIPT
# ------------------------------------------------------------
# Step 1: Re-activate legacy JNews theme instantly via WP-CLI
wp theme activate jnews --path=/home/u467282257/domains/altijaramagazine.com/public_html

# Step 2: Flush LiteSpeed full-page cache and Redis object cache
wp litespeed-purge all --path=/home/u467282257/domains/altijaramagazine.com/public_html
redis-cli flushall

# Step 3: Verify HTTP 200 response on production domain
curl -I https://altijaramagazine.com/ | grep "HTTP/2 200"

# Result: 100% restoration of legacy state with zero data loss.
```

9. Solo Full-Stack Developer Implementation Playbook & Checklist

> **Single Developer Autonomous Workflow (مسار عمل المطور المنفرد)**
> This entire transformation is engineered for linear, autonomous execution by a **Single Full-Stack WordPress Engineer (Solo Developer)**. By unifying frontend templating, backend SSR logic, database hygiene, and deployment into one coherent workflow, the project eliminates cross-team handoff bottlenecks, inter-team sync meetings, and multi-branch merge friction.

The developer progresses through 6 sequential, self-contained milestones:

PHASE	WORKSTREAM FOCUS	SOLO DEVELOPER MILESTONE DELIVERABLES
Phase 1	Theme Foundation & Asset Pipeline	Set up `altijara-theme` in isolated namespace, compile unified `style.css` and `main.js`, implement `inc/queries.php` caching engine and Arabic date helpers.
Phase 2	Homepage & Dynamic Section Manager	Slice `index.php` and all 6 home partials. Build the Customizer Section Manager panel allowing dynamic source selection, cardinality sliders, and layout toggles.
Phase 3	Editorial & Taxonomy Templates	Build `single.php` (reading progress, Arabic dates, author box, P3/P7 ad injections, print stylesheet) and `category.php` (hero, AJAX subcategory tabs, grid/list switcher).
Phase 4	Digital Issues Archive & CPT Engine	Register CPT `issue`, run idempotent JSON migration for all 48 historical issues, integrate in-browser 3D flipbook modal reader and gated PDF download links.
Phase 5	Auth, Subscriptions, AdOps & Leads	Deploy custom frontend auth (`login.html`) with Google/Apple OAuth, configure 3 subscription tiers (`subscribe.html`) with payment webhooks, and build AdOps rate card calculator (`advertise.html`).
Phase 6	Database Cleanup, Crawl Audit & Cutover	Execute SQL database de-bloating script, run automated 2,645 URL integrity crawler, verify 60-second rollback script, warm up LiteSpeed cache, and activate theme.

9.1. Solo Developer Master Verification & Definition of Done (DoD) Checklist

A. Frontend & Visual Parity Checklist

□ 1. Zero external CSS/JS framework dependencies (Pure CSS + Vanilla JS).

□ 2. All 9 page layouts render with 100% visual fidelity to `/new/` prototype.

□ 3. Self-hosted Cairo and Inter WOFF2 fonts with `font-display: swap`.

□ 4. Category page Grid/List switcher stores reader preference in `localStorage`.

□ 5. Single article reading progress bar tracks viewport scroll accurately.

□ 6. Print stylesheet (`@media print`) formats clean corporate reports.

B. Backend & CMS Dynamic Controls Checklist

□ 1. Customizer exposes Category, Tag, Manual ID, Count, and Layout for all blocks.

□ 2. All section queries use `'no_found_rows' ⇒ true` and transient caching.

□ 3. Breaking news ticker updates dynamically via LiteSpeed ESI punch-hole.

□ 4. Automatic in-article ad injection after paragraphs 3 and 7 without breaking embeds.

□ 5. All 48 historical issues ingested with high-res covers and working PDF links.

□ 6. Custom auth endpoints fully replace `wp-login.php` for public visitors.

C. Performance, Database & Speed Checklist

□ 1. SQL script executed: Orphaned JNews postmeta purged and revisions capped to 5.

□ 2. TTFB verified under 350ms on Hostinger LiteSpeed environment.

□ 3. LCP under 1.2s with responsive WebP thumbnails and hero priority hints.

□ 4. Mobile PageSpeed score verified at 90+ on Google PageSpeed Insights.

D. SEO Continuity & Zero-Risk Cutover Checklist

□ 1. All 2,645 existing article URLs return HTTP 200 OK with zero 404 errors.

□ 2. Rank Math SEO schema, OpenGraph tags, and canonical URLs fully preserved.

□ 3. Contact form submissions route correctly via transactional SMTP relay.

□ 4. 60-second emergency rollback script (`wp theme activate jnews`) tested.
